COIN LISTING

Coin listing
ICO

If you are developer or official representative of cryptocurrency, you can request adding your cryptocurrency to Livecoin by two different ways. First way is in priority for us.

1. First way is a direct payment. Price for listing new cryptocurrency is 3 BTC. If you're interested, please contact us via support@livecoin.net

Don't forget to provide detailed information (including technical one) about your cryptocurrency.

2. Second way is a voting. Send request via tickets (/chat/support/) or email to add your coin to the voting list (/voting/). It is free and no information of your cryptocurrency is required, we only ask for cryptocurrency name and trading symbol. After that you may ask your community to vote for your cryptocurrency or send paid votes by yourself (visit voting section (/voting/index) for more details). Paid votes are not limited. First cryptocurrency in the voting list is the major candidate to get added to Livecoin. We add cryptocurrency if this is possible technically. Next conditions (below) are required to get work started.

Please provide the following data when you request listing:

- Link to official git of your node
- Link to bitcointalk topic or any similar forum / dedicated board of your cryptocurrency
- Link to official website of your cryptocurrency
- Link to blockchain which must operate, it can not be under construction or in beta

Make sure that your git have technical manual to compile node.

By applying request to add coin, you as developer agree to report about technical issues with your cryptocurrency, node, block explorer etc. You also agree to notify us about possible forks beforehand. Developer is responsible for cases of losing coins due to fork or technical / security issues with node.

We will review your application and in positive case offer you to send payment to special BTC address. We will start working on listing of your cryptocurrency after getting payment. Listing can take up to 2 weeks due to big queue.
