Back in 2015 I asked a simple question - [can we do better than fiat money](#)? At that time I thought [multi-asset blockchains](#) had the potential to do so through [disintermediation of trust](#) by [deconstruction of trust](#), and use of [smart contracts](#) along with [kit protocols](#). I still do!

Interestingly, the recent popularity of Initial Coin Offerings is heading towards my [seven billion currencies](#) hypothesis, which has prompted a lot of people to reach out for advice, so below I have compiled my previous blogposts that I think should help to understand the many aspects that must be considered when dealing with coins and tokens.

Mega trends that are driving coins and tokens:

- [Tomorrow's World](#), [X-Finance](#), [Corporate Agility](#), [Crypto Politics](#), [The Great Unbundle](#)

Business models and use cases enabled by coins and tokens:

- [Blockchain Disruption Evaluation](#), [Decentralised Business Models](#), [Blockchain Business Models](#), [Long Tail of Trust](#), [Internet of Things](#), [Distributed Communication](#), [Delivery v Payment](#), [Land Registry](#), [Central Bank Digital Cash](#), [Smart Account](#)

Governance of coins or tokens with DAOs and foundations:

- [Peer-to-Peer Autonomous Legal Entity](#)

Digital identity and public reference data for use with coins and tokens:

- [Simple Attestations](#), [Digital Identity Passport](#), [Digital Identity on Blockchain](#), [Corporate Digital Identity](#), [Reference Data](#)

Coin fiscal and monetary policies, credit tokens:

- [Bitcoin Supremacy](#), [Bitcoin Money Creation](#), [Coin Fiscal and Monetary Policies](#),

Legal position and why coins done right should excite regulators:

- [Legathon Notes](#), [Legal Position](#), [Combining Ricardian and Smart Contracts](#), [Macro Benefits](#), [Regulator Inclusive](#), [Security and Resiliency](#), [Audit Assurance](#), [Crypto Securities](#)

Coin privacy and confidentiality, right to be forgotten and post-quantum risks:

- [Transaction Privacy](#), [Privacy and Confidentiality on Blockchain](#), [Autonomous Validators](#), [Mining Rights](#), [Chameleon Hashes](#), [Post-Quantum Risks](#)

Scaling coins and making them performant:

- [Big Blockchain](#), [Proof of Elapsed Time](#)

Risk of and case for centralised blockchains and coins:

- [dApp Centralisation](#), [Centralised Blockchains](#)

Thank you Alex!

For a legal analysis, here's an article, I archived, on the token.farm GitHub repo: <https://github.com/TokenFarm/Welcome/blob/master/legal-analysis-securities-law-framework.pdf>

token.farm* is a new community platform for blockchain and cryptocurrency development, supported by strong legally structured and transparent ICOs and Token Sales.
