ICO

Coin listing

ICO

The ICO procedure at our Exchange costs 3 BTC (non-refundable payment). ICO implies coin integration to the Exchange, no surcharge included. It means the indicated price includes the coin listing to the Exchange and the ICO procedure itself.

You must be the coin owner, developer or official representative to apply for ICO. We do not negotiate with third parties.

To provide ICO procedure you will have to perform listed below:

- You must send us the node for your coin which we should successfully compile.
- The premine funds for ICO procedure must be transferred to the Exchange's wallet, details are to be imparted after we would compile the node.
- After ICO procedure is finished your coin's blockchain must be fully activated within 5 workdays.
- The wallet for customers must be fully activated within 5 workdays as well.
- ICO opening and closure dates must be officially announced and indicated by you at the coin site and the official threads.
- You have right to seek refunding for the customers if ICO is considered to be unsuccessful or the total of coins was not entirely sold out. You must pronounce this will no later than 1 workday in advance before ICO ends so that we have enough time to provide refunding.
- Customers would be able to withdraw the coins they purchased in 5 workdays after ICO ends.
- You will be able to take 30% of funds collected for ICO in 5 workdays after successful ICO closure. The rest of 70% you will get in 30 calendar days more. This is the least step we can provide for the investors' protection.
- As soon as ICO ends the coin is implemented at the Exchange for trade without any restrictions.
- ICO period must be not less than 7 calendar days and not more than 90.
- Specify network fee.

A specific account to be created at the Exchange for ICO procedure and we make a sell order at a price you have listed.

We can provide multistage ICO according to your will with no surcharge. In this case different amount of coins are rated at different prices so that conditions attract the first investors and rise interest towards ICO.

We, as the Cryptocurrency Exchange, commit to burn the part of premine that was not sold out, otherwise the customers will receive a refund according to developer's will. After not sold-out rest of coins is eliminated we commit to provide confirmation in public.

The Exchange is not responsible for developers' trustworthiness and does not guarantee further development of the project to investors. The only protection the Exchange can provide for investors is a 35-day-long hold of funds for project's developers.

If developer is caught at evidence scum (recognised by community) after successful ICO procedure, we reserve the right to limit coin enlisting and delist it from the Exchange afterwards. Here is an example of evidence scum: if the number of coins in the network raise over the initially reported number, and it is possible to check by blockchain, it

is considered as evidence scum.
